Work Experience

Working Group Member

Feb 2026 – Present

Turbin3 Pinocchio Working Group

- Built production-style Solana programs using Pinocchio for Enmarch's core on-chain flows.
- Collaborated in a 3-member team to ship an end-to-end product spanning on-chain programs, client apps, and backend infrastructure.
- Implemented and tested the complete program layer for Enmarch, covering state management, permissions, and proof-backed update flows.

Builder

Jul 2025 – Nov 2025

Turbin3 Builders Cohorts

- Built hands-on Solana programs across vaults, escrow, AMMs, staking, and transfer-hook patterns.
- Strengthened expertise in PDAs, CPI calls, SPL Token flows, secure program design, and Anchor development.
- Tested programs using Codama, Gill, Chai, and LiteSVM.

Full Stack Engineer

Nov 2024 – May 2025

Cygnnet.One, Ahmedabad

- Built client-facing features using React.js and .NET across production web applications.
- Collaborated with cross-functional teams to deliver responsive, reliable, and maintainable product features.
- Improved UI quality and user experience across major client projects.

Projects

Enmarch

- **Private Messaging on Solana:** Engineered a wallet-authenticated encrypted messaging platform with invite-based conversations, local key handling, and verifiable on-chain state updates.
- **Web + Mobile Clients:** Built a React 19 + Vite web app and Expo/React Native Android app with real-time chat UX, wallet flows, deep-link invites, and encrypted sync across devices.
- **Realtime Backend + ZK Flow:** Developed a Bun + Redis backend for challenge/response auth, WebSocket relay, offline sync, commitment tracking, and zk-verified message-root transitions.
- **Solana Program + SDKs:** Implemented Rust/Pinocchio programs for root-state management, permissions, and X-Wing key registration, plus reusable TypeScript packages for encryption, Merkle trees, clients, and circuits.

Veil

- **Private Recurring Payments:** Built a Solana payroll protocol in Anchor using vault funding, Merkle-tree recipient privacy, and MagicBlock Ephemeral Rollups for TEE-backed execution.
- **Full Product Stack:** Shipped a devnet on-chain program, published TypeScript SDK (@veil-dev/sdk), self-hosted coordinator, Vercel docs, and Next.js dashboard for vault and schedule management.
- **Coordinator Infrastructure:** Engineered a Node.js/Express service with PostgreSQL + Drizzle ORM for schedule validation, due execution monitoring, ER delegation, execution history, metrics, and Railway deployment.
- **Developer Experience + Milestones:** Built SDK utilities for PDA derivation, Merkle proofs, vault/schedule operations, and developer docs; received a Superteam India Grant and submitted to Colosseum Frontier Hackathon.

Skills

- **Languages:** JavaScript, TypeScript, Rust, Golang
- **Web3:** Solana, Anchor, Pinocchio, SPL Token, Token 2022, PDAs, CPIs
- **Testing:** LiteSVM, Gill, Codama, Chai, Web3.js
- **Backend:** Node.js, Express.js, Bun, Redis
- **Frontend:** React.js, Next.js, React Native, Expo
- **Databases:** PostgreSQL, MongoDB, MySQL
- **DevOps:** Docker, Railway, Vercel

Education

Poornima Institute of Engineering and Technology

2020 – 2024 — CGPA: 8.82

Bachelor of Engineering
